Listing of Claims:

1. (Currently Amended) An image pickup device comprising:

an image pickup unit configured to pick up an image of an object;

an image storage unit configured to store the image which is

5   picked up by the image pickup unit;

a connection unit connectable to ~~the~~ a network;

an address storage unit configured to store ~~an address~~ a

plurality of addresses on the network set by a user in advance;

an information obtaining unit configured to obtain

10   information on the network based on the ~~address~~ addresses stored

in the address storage unit;

an information storage unit configured to store the

information obtained by the information obtaining unit; and

an adding unit configured to add the information ~~obtained by~~

15   ~~the information obtaining~~ stored in the information storage unit

to the image stored in the image storage unit.

2. (Currently Amended) An image pickup device according to

claim 1, further comprising a setting unit configured to set a

time interval at which the information obtaining unit obtains the

information on the network based on the ~~address~~ plurality of

5   addresses stored in the address storage unit.

Claim 3 (Canceled).

4.   (Currently Amended) An image pickup device according to

claim 1, further comprising a browser file creating unit

configured to create a file ~~having~~ including the image stored in

the image storage unit and the information added to the image in

5   a format which can be browsed by a terminal accommodating a

browser software.

5.   (Currently Amended) An image pickup device according to

claim 2, further comprising a browser file creating unit

configured to create a file ~~having~~ including the image stored in

the image storage unit and the information added to the image in

a format which can be browsed by a terminal accommodating a

browser software.

Claim 6 (Canceled).

7.   (Currently Amended) An image recording method

comprising:

reading ~~an address~~ a plurality of addresses on a network

~~which is~~ which are set by a user in advance and which are stored

5   in an image pickup device;

connecting the image pickup device to ~~a site~~ sites

designated by the read ~~address~~ addresses through the network;

obtaining information from the ~~site~~ sites through the

network;

10   storing the obtained information; and

adding the ~~obtained~~ stored information to a picked up image

when the image pickup device stores the image.

8.   (Currently Amended) An image recording method according

to claim 7, wherein the ~~obtaining comprising~~ information is

obtained cyclically ~~obtaining the information with~~ at a

predetermined time interval.

9.   (Currently Amended) An image recording method according

to claim 8, wherein ~~the~~ a respective predetermined time interval

is determined for each ~~information to be obtained~~ of the

plurality of addresses based on a content of the information to

be obtained from the respective sites designated by the

addresses.

10.   (Currently Amended) An image recording method according

to claim 7, further comprising creating a file ~~having~~ including

the image and the added information in a format which can be

browsed by a terminal accommodating a browser software.

11.   (Currently Amended) An image recording method according
to claim 8, further comprising creating a file ~~having~~ <u>including</u>
the image and the added information in a format which can be
browsed by a terminal accommodating a browser software.

12.   (Currently Amended) An image recording method according
to claim 9, further comprising creating a file ~~having~~ <u>including</u>
the image and the added information in a format which can be
browsed by a terminal accommodating a browser software.

13.   (Currently Amended) An image recording system
comprising:

an image recording unit connectable to a network and
configured to record image data of an object; and

5   a server unit configured to provide information through the
network,

wherein the image recording unit adds the information<u>, which
is</u> obtained from the server unit <u>by the image recording
unit</u> through the network <u>based on a plurality of addresses set by</u>

10   <u>a user in advance,</u> to the image data when the image recording
unit records the image data.

14.   (Currently Amended) An image recording system according
to claim 13, wherein the image recording unit cyclically obtains

-21-

the information from the server unit ~~with~~ at a predetermined time interval.

15.   (Currently Amended) An image recording system according to claim 14, wherein ~~the~~ a respective predetermined time interval is determined for each ~~information to be obtained~~ of the plurality of addresses based on a content of the information to be obtained.

16.   (Currently Amended) An image recording system comprising:

an image recording unit configured to record image data of an object;

5   a server unit configured to provide information through ~~the~~ a network; and

a network access unit connected to the image recording unit and configured to be connected to the server unit through the network, to obtain the information from the server unit through

10   the network based on a plurality of addresses set by a user in advance, and to transfer the obtained information to the image recording unit,

wherein the image recording unit records the transferred information in association with the recorded image data.

17.   (Currently Amended) An image recording system according to claim 16, wherein the image recording unit records the transferred information in association with <u>the</u> recorded image data based on an obtaining date of the transferred information and a pick-up date of the recorded image data.

18.   (Currently Amended) An image recording system according to claim 17, wherein the image recording unit records ~~such~~ information in association with <u>the</u> recorded image data that has <u>a same</u> ~~the~~ obtaining date ~~same~~ as the pick-up date of the recorded image data<u>.</u>

19.   (Currently Amended) An image recording system according to claim 16, wherein the image recording unit outputs the recorded image data and <u>the</u> obtained information in a form ~~allowing~~ to be printed out all at once.
